Customer Shopping Behavior Analysis

An analysis of 3,900 retail transactions

The Business Problem & Key Insight

Business Problem

- Revenue is concentrated: Clothing alone drives 45% of $233K total, and shoppers aged 36–65 generate 57% of revenue — the business is over-reliant on a narrow customer and category mix.
- Only 27% of customers are subscribers, and 43% of orders use a promo code — yet neither lifts basket size above the $59.76 average.

Key Insight

- Discounts bring people in, but they don't make them spend more. Customers with a promo code spend about the same as those without (~$60 per order).
- To grow revenue, focus on getting each customer to spend more per order — for example, "$10 off when you spend $75+", bundle deals, or member rewards — instead of just giving bigger discounts to attract new buyers.

Tools & Methodology

Microsoft Excel

Structured tables; SUMIFS / COUNTIFS / AVERAGEIF aggregations.

Native Excel charting

Bar, column, and doughnut visualizations.

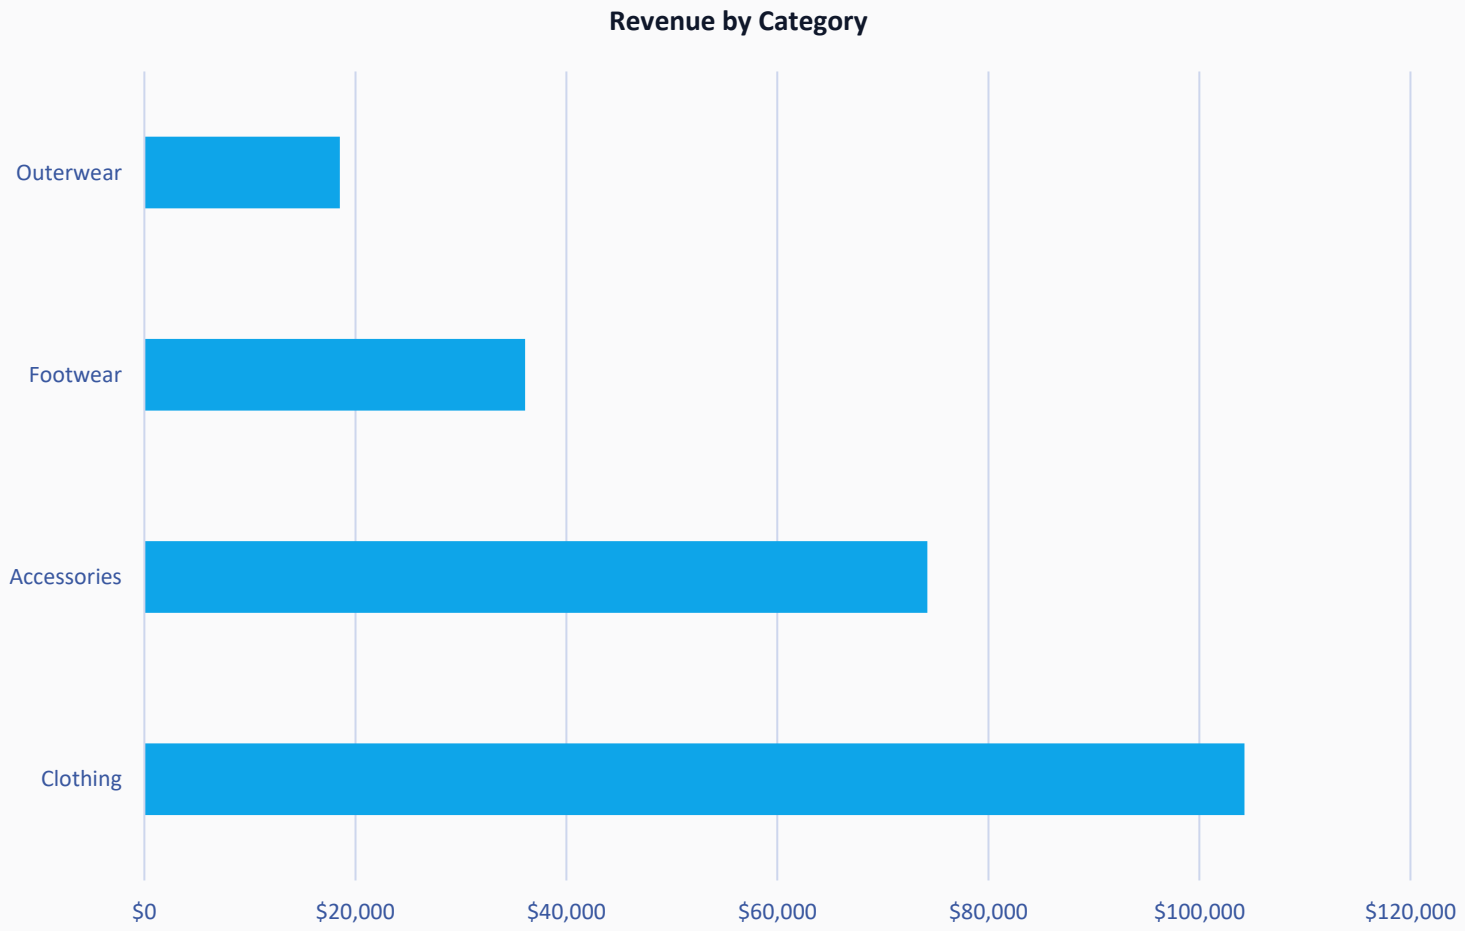
Custom minimal theme

Light background with a single sky-blue accent.

Key Metrics

$233,081 Total Revenue	**3,900** Customers	**$59.76** Avg Order Value
3.75 Avg Review Rating	**27.0%** Subscribers	**43.0%** Promo Code Usage

Clothing Leads, Accessories Punch Above Their Weight



TAKEAWAY

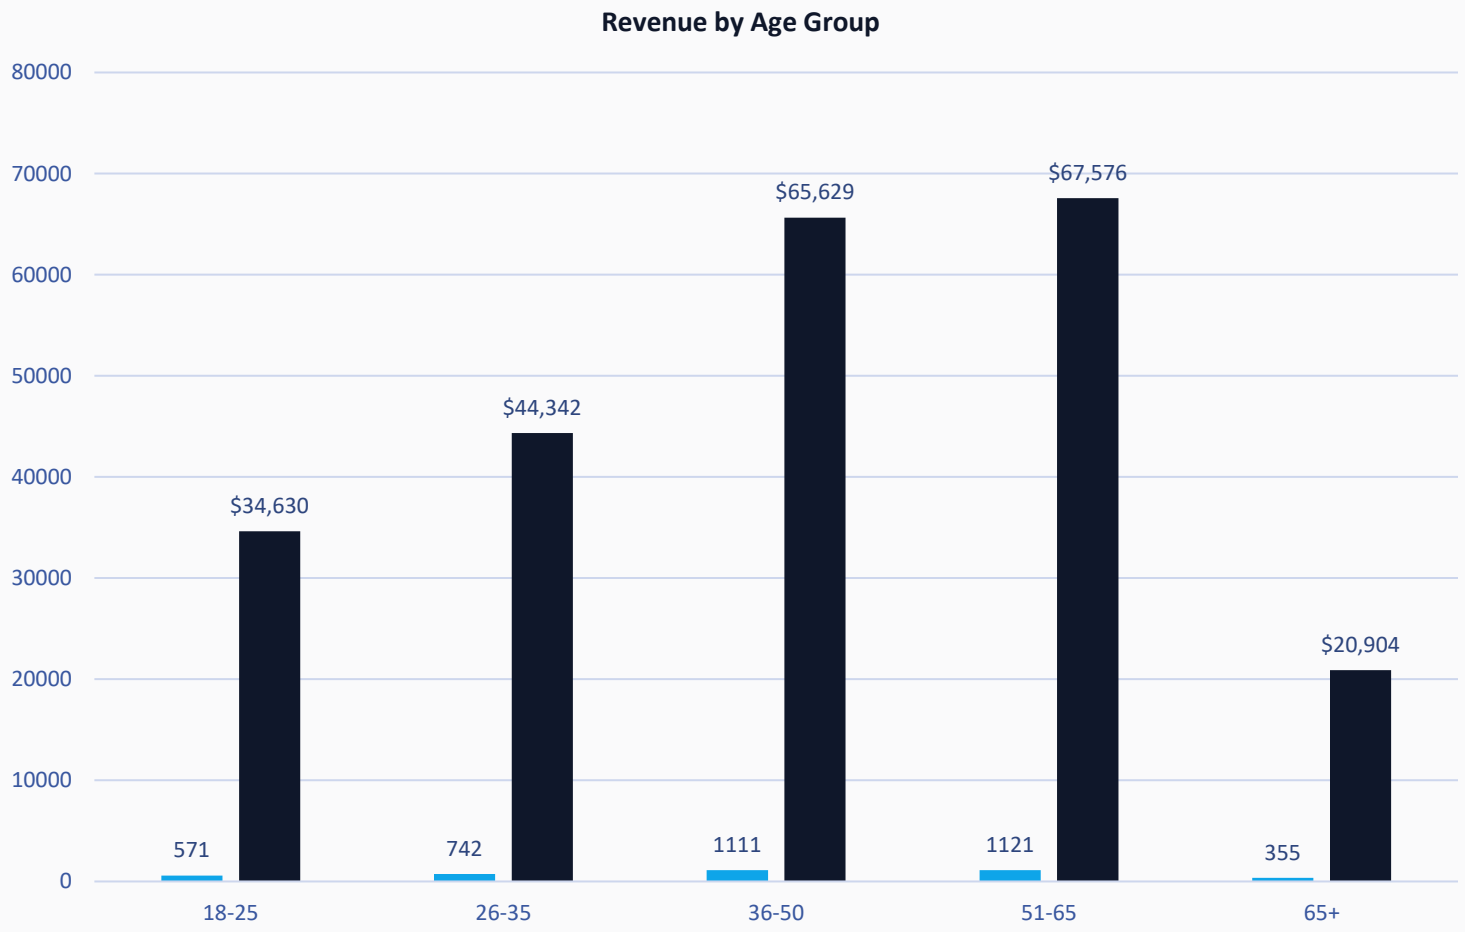
Clothing drives **45% of revenue ($104K)**. Accessories follow strong at 32% ($74K). Outerwear is just 8%.

Demand Is Remarkably Even Across Seasons

TAKEAWAY

Only a **7% spread** between the highest (Fall, $60K) and lowest (Summer, $55.8K) seasons. Year-round planning beats seasonal stocking.

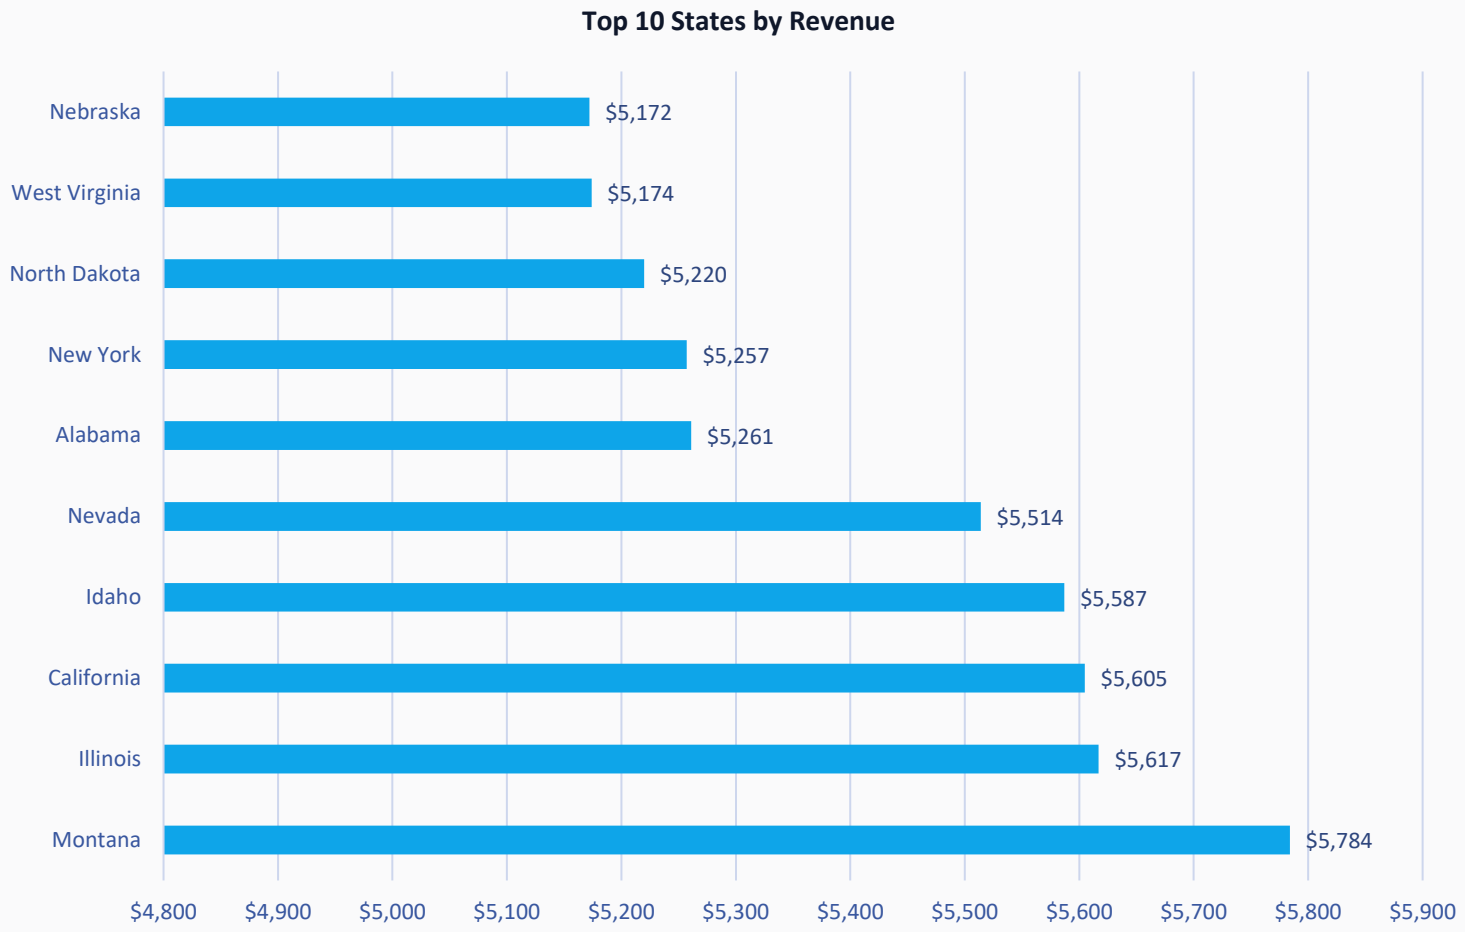
The 36–65 Customer Drives the Business



TAKEAWAY

Customers **36–65 generate 57% of revenue**. AOV is flat across age bands (~$59), so volume — not basket size — drives the difference. Don't skew marketing young.

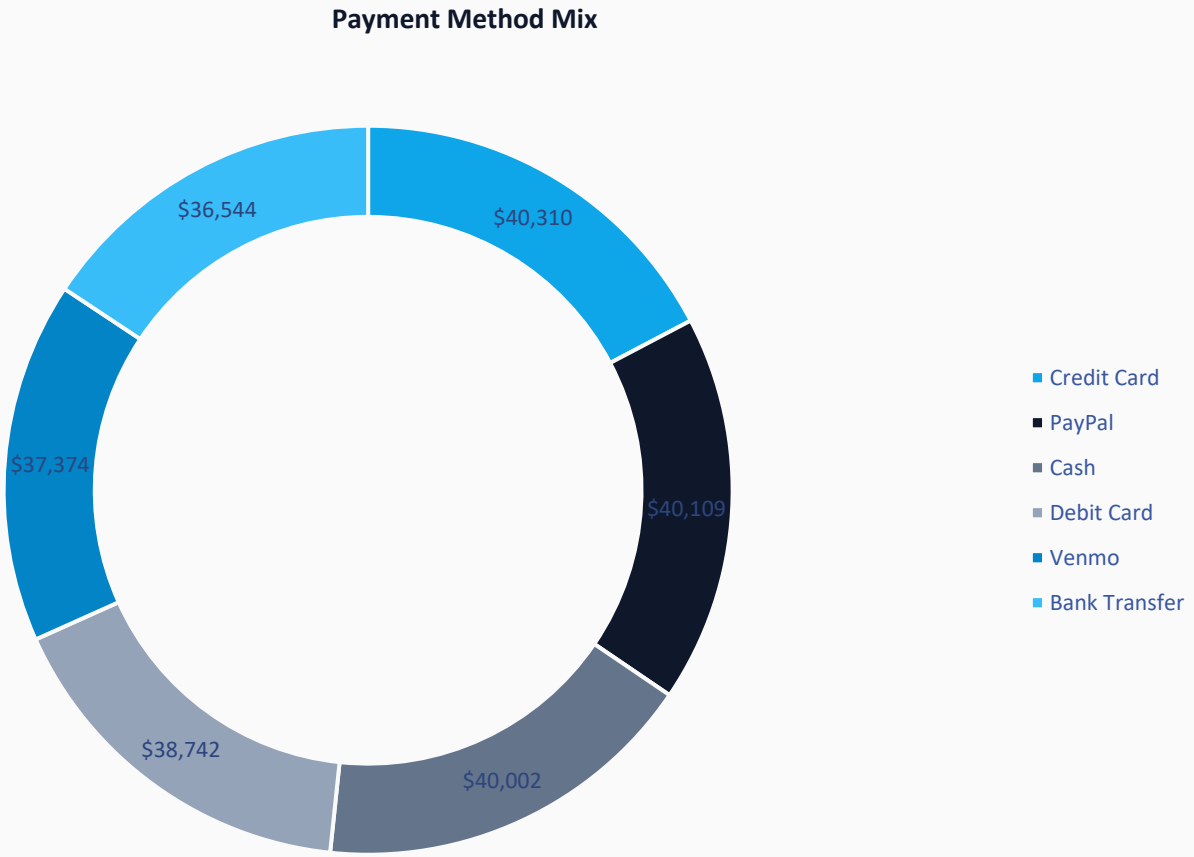
Top 10 States by Revenue



TAKEAWAY

Revenue is **broadly distributed** — the top 10 states each contribute $5.1K–$5.8K, with no single dominant market.

Payment Methods Are Evenly Split



TAKEAWAY

Six payment methods each account for **16–17% of revenue**. No single processor dominates — flexibility matters more than optimization for any one method.

INSIGHT 01

Promos Drive Conversion, Not Basket Size

43% of orders use a promo code, but average order value with promo (**$59.28**) is essentially the same as without (**$60.13**). Discounts are converting buyers, not lifting baskets.

Recommendation: Test threshold promos like "$10 off $75+" to lift AOV.

INSIGHT 02

Subscribers Are Loyal but Don't Spend More

27% of customers are subscribers, contributing 27% of revenue. Their AOV (**$59.49**) matches non-subscribers (**$59.87**) — the program drives retention, not basket lift.

Recommendation: Bundle perks that incentivize larger orders.

Recommendations

Test threshold-based promos
Convert promo-driven buyers into bigger baskets.

Bundle subscriber perks for AOV lift
Keep retention while growing ticket size.

Plan inventory year-round
No seasonal peak means flat-line stocking.
